

Ahmed Ali

Software Engineer

theahmedjoyali@gmail.com | (951) 972-0472 | Mira Loma, CA | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Summary

Software Engineer with a focus on building scalable full-stack applications and integrating generative AI models into production workflows. Proven experience in designing robust testing frameworks, managing API integrations, and collaborating within Agile environments to deliver high-quality media-focused technology solutions.

Technical Skills

Languages: TypeScript, JavaScript, Python, HTML, CSS, Node.js, PHP, GoLang, Java, C#, C++

Frameworks: React, Next.js, Vue.js, Redux, Flask, Bootstrap, Tailwind CSS, Vite, Storybook, WCAG 2.x, Twig

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Firebase/Firestore

Testing & Quality: Cypress, Playwright, Cucumber, Gherkin, Jest, PyTest, Chromium, Appium, TestRail, Unit/Integration/Regression Testing, A/B Testing, Behavioral Driven Development

DevOps & Tools: Postman, DataDog, Sentry, Webpack, Git, GitHub, Jenkins CI/CD, Docker, Kubernetes, AWS, Azure DevOps, Google Cloud Platform, Vercel, Jira, Agile/Scrum

Experience

DataAnnotation - Remote

Jan 2024 - Present

AI Data Specialist - Independent Contractor

- Boosted model output accuracy by 25% by evaluating code patches across TypeScript, Python, and JavaScript against strict engineering rubrics.
- Reduced hallucination rates by 10% by identifying edge case failures in LLM-generated code and providing structured feedback for model retraining.
- Validated generative AI code output against reliability rubrics, ensuring production-level correctness for complex software tasks.
- Collaborated with model training teams to establish guardrails that improve the reliability of LLM-generated code in enterprise contexts.

Skinstric AI - Remote

Nov 2025 - Dec 2025

Full-stack Engineer - Intern

- Built a full-stack application achieving 98% prediction confidence by integrating OpenAI Vision API via RESTful Google Cloud Functions.
- Developed a custom RAG system using Python, FastAPI, and Qdrant to manage data ingestion, vector storage, and retrieval in a cohesive pipeline.
- Architected a responsive Next.js frontend, ensuring cross-device consistency and UI accessibility through WCAG-compliant semantic HTML and Tailwind CSS.
- Designed a typed React component library with TypeScript to improve code maintainability and eliminate duplication across the application.

Platform Science - San Diego, CA

Jun 2023 – Jan 2024

Software Development Engineer in Test

- Cut post-release defects by 30% across a compliance-critical fleet management platform by deploying automated test suites covering web (TypeScript, Vue.js, Cypress, Chromium) and Android mobile (Python, PyTest, Appium) platforms.
- Eliminated 25% of critical user errors by instrumenting manual testing coverage for fringe cases outside automation scope and monitoring production behavior using DataDog to surface error patterns and regressions.
- Saved \$10,000 annually and modernized the testing foundation by 5% by leading migration from GhostInspector to TypeScript and Cypress and implementing Gherkin scripting with Cucumber to enforce Behavior-Driven Development, improving test readability and long-term maintainability across the monorepo codebase.
- Leveraged Docker to isolate and validate software across multiple build configurations and customer-specific environments, ensuring consistent and reproducible execution regardless of deployment target.
- Accelerated release confidence by 15% by integrating automated regression and integration test suites into a Jenkins CI/CD pipeline and triaging defects through TestRail, enabling consistent software delivery across build configurations.
- Delivered quality improvements consistently by participating in Agile/Scrum ceremonies including standups, sprint planning, backlog refinement, cross-team collaboration, and retrospectives using Jira to manage team-wide deliverables.

Education

California State University San Marcos - Bachelor of Science, Computer Science
